OBJECTIVE

AI-Powered Full-Stack Engineer focused on designing and delivering intelligent, scalable products that drive real impact. In the short term, I aim to join a forward-thinking team where I can contribute as both a full-stack and AI engineer, building reliable systems and turning complex problems into elegant solutions. Long-term, I aspire to lead AI-driven product development and architect innovative SaaS products that create meaningful impact across emerging markets.

WORK EXPERIENCE

Knowledge Discovery and Data Science Lab, FAST-NUCES

Jun 2025 – Aug 2025

Summer Intern – AI, ML & CV

Built an end-to-end deep learning pipeline to generate images from text, training custom models on curated datasets without external APIs to optimize accuracy and model efficiency.

openHPI – Hasso Plattner Institute

May 2025

Practical Computer Vision with PyTorch Trainee

Gained hands-on expertise in PyTorch for Computer Vision, implementing CNNs, Vision Transformers (ViTs), and diffusion-based models for object detection and image segmentation tasks.

EDUCATION

FAST-NUCES, Islamabad, Pakistan

Aug 2023 – June 2027 (Expected)

Bachelor of Software Engineering

Relevant Coursework: AI & Machine Learning, Data Mining, Database Management Systems, Software Quality Assurance, Operating Systems.

PROJECTS

Gesture-Controlled Drawing Application — *Python, OpenCV, MediaPipe, NumPy*

Developed a real-time Python application using MediaPipe and OpenCV to enable webcam-based hand tracking for drawing, shape recognition, and intuitive gesture-driven UI controls.

Career Connect – Job Fair Management System — *SQL Server, Desktop Application*

Designed a 3NF-normalized SQL Server database and desktop application featuring multi-role access, real-time check-ins, and an admin dashboard for placement and interview analytics.

Multithreaded Pacman Game — *C, Threading & Synchronization*

Implemented a C-based concurrent game engine applying OS synchronization primitives to manage player movement and enemy AI behavior for smooth, thread-safe performance.

Workout Management Platform — *OOP, Design Patterns*

Designed a scalable workout tracking system using OOP principles, allowing users and trainers to create personalized plans and monitor performance metrics through a user-friendly interface.

ACHIEVEMENTS

1st Position, App Development – SOFTEC (FAST Lahore): Secured first place in a prestigious 24-hour national competition, competing against students from across Pakistan to develop a high-performance mobile application.

Winner, University-Wide AI Hackathon – SES Society: Outperformed multi-university teams by developing a functional technical solution within a limited timeframe, demonstrating rapid prototyping and collaborative problem-solving skills.

4-Time Teaching Assistant – FAST-NUCES Islamabad: Selected for four consecutive terms to assist faculty in core computing courses, mentoring junior students in programming logic, debugging, and software engineering principles.

CERTIFICATES

Practical Computer Vision with PyTorch

Issued May 2025

Hasso Plattner Institute

Fundamentals of Machine Learning and Artificial Intelligence

Issued Jun 2025

AWS Training & Certifications

Volunteer IT – Indus AI Week

Feb 2026

Ministry of IT Pakistan

TECHNICAL SKILLS

AI & Machine Learning: Supervised/Unsupervised Learning, Deep Learning, NLP, Generative AI, RAG Pipelines, Similarity Search.

Frameworks & Libraries: TensorFlow, PyTorch, Scikit-learn, LangChain, HuggingFace, Pandas, NumPy, Streamlit, Flask.

Databases: MongoDB, MySQL, Sqlite, Postgresql, ChromaDB.

Programming: Python, C++, Java, JavaScript, SQL, HTML, CSS.

Tools: Git/GitHub, VS Code, Cypress, Jupyter Notebook.

LANGUAGES

Urdu: Native

English: Intermediate Proficiency
